

Alfalfa Plus

Organic nitrogen and potassium fertiliser

Characteristics:

Mini-pelleted blend of three of the most well-known green manures: alfalfa, comfrey and seaweed.

ALFALFA: a renowned green manure crop, naturally rich in nitrogen.

COMFREY: the ideal complement to alfalfa, rich in readily available potassium and a range of trace elements and vitamins, long-known to have beneficial effects on plant health, yield and resistance to disease.

SEAWEED: contains hormone-like substances (cytokinins) for enhanced plant growth. Natural source of vegetal mucus, which absorbs soil moisture, causing rapid disintegration of pellets and has water-retaining properties.

Advantages:

- Improves soil structure with the addition of quality organic matter.
- Helps maintain healthy populations of micro-organisms, essential for the breakdown and availability to plants of soil nutrients.
- Maximises flowering potential and yields.
- Reinforces plant resistance to disease and drought.
- Small-format pellets for easy and regular broadcasting.

100% plant origin

- Safer for the user and environment.
- Zero risk of contamination.

Boosts plant resistance to disease and drought

Usage:

Perennials	Tubers	Annuals	Planters	Lawns	Compost	Transplants	Soil preparation
50gm of pellets/m ²	40gm of pellets per metre of trench	50gm of pellets/m ²	100gm of pellets/5 litres of unfertilised peat*	70gm of pellets/m ²	1kg of pellets/100kg of compost. Apply in	30-50 gm of pellets depending on plant size	100gm of pellets/m ²
Early Spring	At planting	At planting or sowing	Spring/Summer	Early Spring	All year round	At transplanting	Autumn and early Spring

* If pre-fertilised peat is being used as planter substrate, wait 2-3 months before adding Alfalfa Plus

Composition:

N: 2.5% P: <1 K: 7%

Trace elements (ppm):

Fe	Na	I
Zn	B	Ca
Mn	Cu	Cl
Mg	Mo	

Vitamins B, B₁₂, E, K, PP

Cytokinins

Packaging:

4 kg bags.

Usable in organic production, conforming to Annex II of Regulation CEE N°2092/91, amended 24/06/1999 NFU 42001
