

Seaweed and comfrey foliar fertiliser

Natural foliar fertiliser for increased plant resistance and yield

Characteristics

B-actif Seaweed and Comfrey Foliar Fertiliser is a liquid combination of two of the most renowned natural growth stimulants of the plant kingdom. Using two species of brown seaweed (laminaire and ascophyllum), this formula activates the principal physiological functions of plants.

The addition of comfrey extract supplies directly available potassium and a wealth of trace-elements, vitamins and hormone-like substances, essential for healthy and sustainable plant/soil exchange.

Increases trace-element and mineral uptake by plants

Avantages

B-actif Seaweed and Comfrey Fertiliser is applied directly to the foliage of plants, where it is readily absorbed. Easy to use and safe for the user and the environment, this formula:

- activates and reinforces natural plant defences,
- improves hydric- & thermic-stress resistance,
- stimulates root development,
- accelerates flowering and fruiting stages, and
- improves yields.

Composition

Dry matter	20%		
pH	environ 6		
Density	1.1		
Macro elements (% gross)			
Nitrate (N)	1	Cl	1-1,5
N (organic)	1	Mg	0,1-0,2
Potassium oxide (K ₂ O)	2	Na	0,4-0,5
Phosphates (P ₂ O ₅)	0,1	S total	0,4-0,5
Ca	0,3-0,4		
Trace elements (ppm gross)			
B	1,5	Mn	18-19
Cu	0,5-1	Mo	0,05-0,1
Fe	120-125	Zn	0,02-0,04
I	600-700		
Organic matter	Manitol, proteins, betaines, fucanes and homofucanes, polyphenols		
Vitamins	B, B12, E, K, PP		

Annuelles

Semis/
transplantation

Plantes
en suspension

Vivaces

Usage

Foliar application.

5 litres of product/hectare added to required amount of water.

Shake well before use.

Packaging

1, 10, 1000 litre containers

Norm NFU 42001

Usable in organic production conforming to annex II of regulation CEE No.2092/91, amended 24/06/1991

Manufactured by **B-actif**,
