

# Natural Lawn Enhancer

**100% vegetal**

## Characteristics:

B-actif Natural Lawn Enhancer is a formulation of several seaweed extracts, comfrey extract and stabilised humic and fulvic acids. The NPK and natural organic complexes (polysaccharides, homofucanes, proteins and polyphenoleic complexes) are readily assimilable by bacteria and ecto-mycorizae present in and around the root matrix of Graminaceae.

## Accelerates recovery of frequently trampled grass

### Advantages:

Safe for the environment and easy to apply, B-actif Natural Lawn Enhancer:

- improves tillering in grass species,
- optimises availability of routine fertiliser input by sustaining high soil microbe populations,
- improves chlorophyll production for healthy verdant turf, and
- reinforces natural defences against drought and trampling.

## Boosts physiological processes in plants and stimulates microbial populations

### Usage:

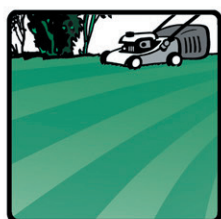

Recommended for lawns and turfs subject to high levels of trampling, this formula is especially adapted for use on sandy, well-drained soils for clay-humic complex development.

Dilution is calculated on a dosage rate of 20 litres of product per hectare. For new leys and establishing turfs, 2-3 applications, after the 3rd-leaf stage, at 3-week intervals.

For general turf maintenance apply once in spring and autumn.

Test for compatibility prior to any bulk mixing with other phyto-sanitary products.

Our responsibility is limited to the guarantee only of the product in its original packaging.

Lawns

### Composition:

N total - 10%  
P<sub>2</sub>O<sub>5</sub> - 6%  
K - 8%  
Comfrey extract  
Seaweed extract

### Packaging:

1, 2.5, 10, 200, 1000 litre containers.
