

Tomatonic

100% plant-origin liquid fertiliser

A natural fertiliser for healthy yields

Characteristics

Comfrey and seaweed have been used by generations of gardeners for their extraordinary effects on the development and health of plants and soils. Today, we know these two plants contain an astounding array of substances which promote fast, vigorous root growth and optimise the nutritional potential of the soil.

B-actif Tomatonic is a concentrated formula of comfrey and seaweed extracts and plant-origin polypeptides. Used in conjunction with a base fertiliser (such as manure or compost), Tomatonic will provide soil microbes and young plants with high-quality, directly assimilable potassium, boron, and a range of other micro and macro elements favouring rapid root and stem development, hardier plants and earlier and more abundant flowering and fruiting.

This non-smelly formula may also be used on all members of the squash family.

Avantages

B-actif Tomatonic is applied directly to the soil at the base of plants where it will be absorbed immediately via the root system. Easy to use and safe for both the user and the environment, this formula:

- activates natural plant defences
- sustains rapid plant growth and development
- boosts flowering and fruiting
- improves yields.

Optimise soil nutrition uptake by tomato plants

Usage Tomatonic is specially formulated for plants belonging to the tomato and squash families. Apply diluted to the soil at the base of stems.

Dosage For direct watering dilute 1 litre of Tomatonic in 80 litres of clean water (ideally rain water) and apply 250ml of solution/plant/week.

For drip-feed systems dilute 1 litre of product in 200 litres of water. Shake well before use.

Solanacées

Norme NFU 42001

Usable in organic production conforming to annex II of regulation CEE No.2092/91, amended 24/06/1991

Composition

Comfrey extract
Seaweed extract
Hydrolised vegetable polypeptides
4% dry matter

N 1	Fe +++	Zn +++
P ₂ O ₅ <1	Cu +++	Mn +++
K ₂ O 3	Ca +++	B +++
Xanthophylles +++		
Vitamins +++		

Packaging

1, 10, 1000 litre containers
